Water vapour radiometry

UNIVERSITEIT VAN PRETORIA
UNIVERSITY OF PRETORIA
YUNIBESITHI YA PRETORIA

In the case of a total power radiometer, DC output voltage is proportional to input noise temperature

Noise temperature

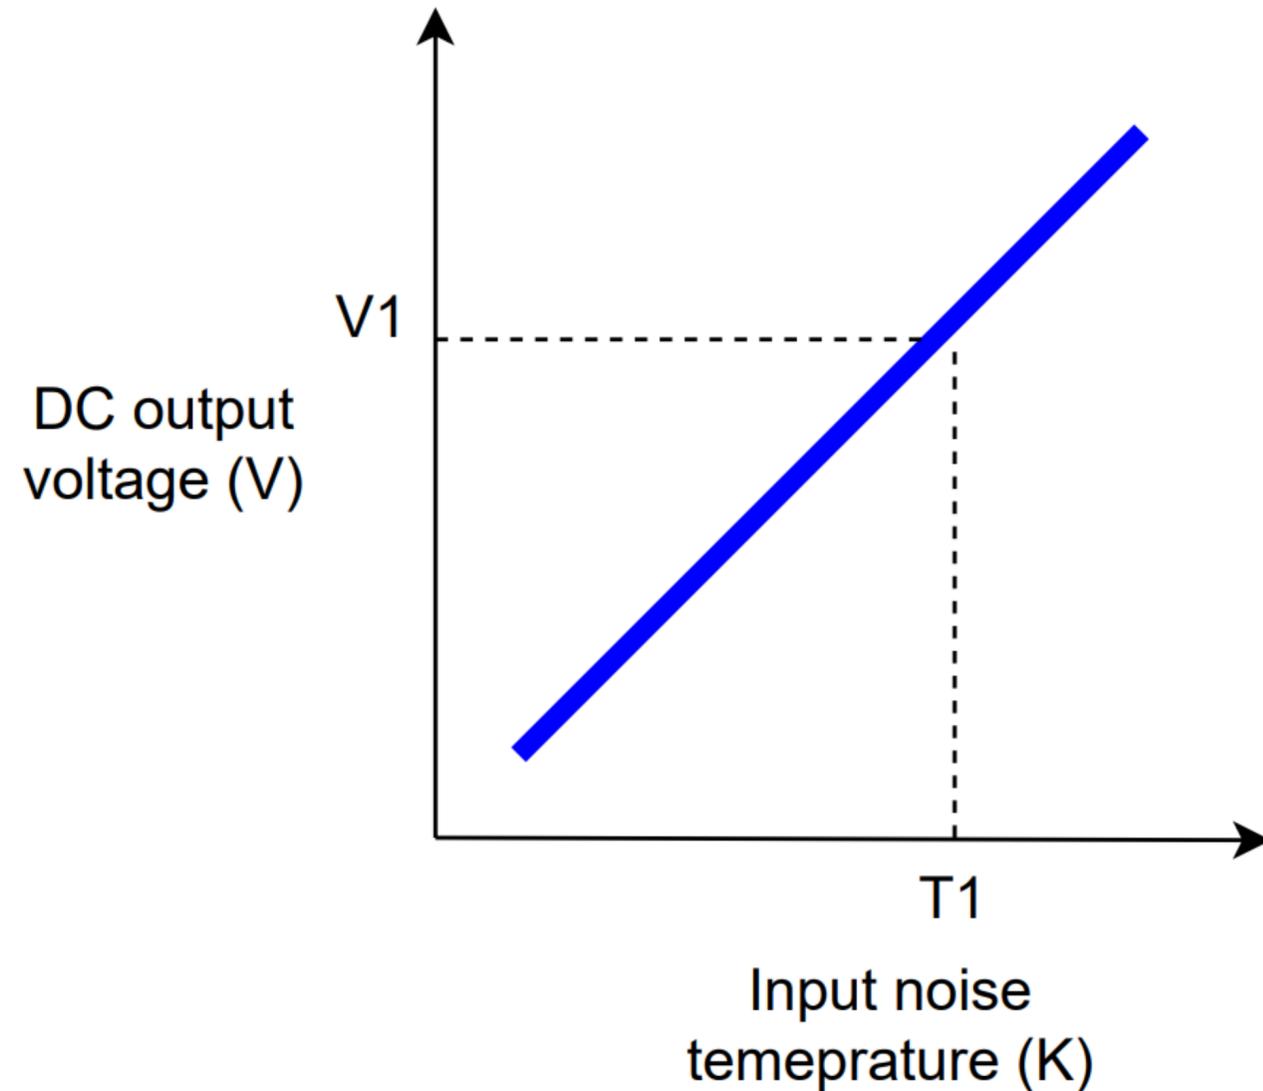

DC Output voltage

Water vapour radiometry

UNIVERSITEIT VAN PRETORIA
UNIVERSITY OF PRETORIA
YUNIBESITHI YA PRETORIA

$$V_1 = A(G(T_1 + T_{sys})) + B$$

A : responsivity of the power detector

B : DC offset of the power detector

G : Gain of the receiver

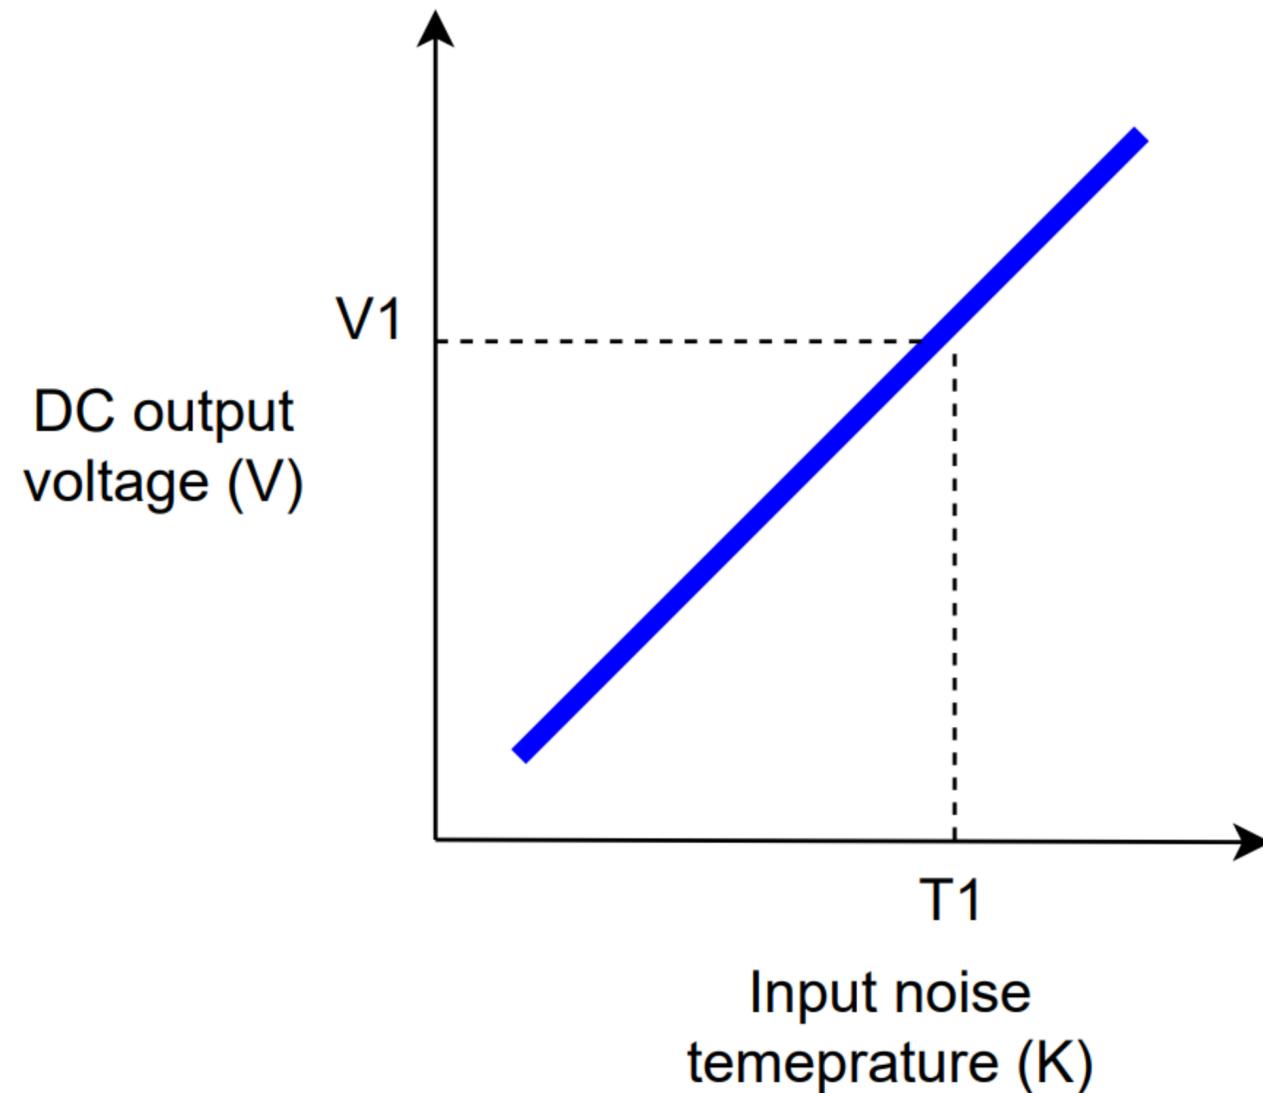

T_{sys} : Noise temperature of the receiver

Water vapour radiometry

UNIVERSITEIT VAN PRETORIA
UNIVERSITY OF PRETORIA
YUNIBESITHI YA PRETORIA

$$V1 = A(G(T1 + T_{sys})) + B$$

A

B

G

T_{sys}

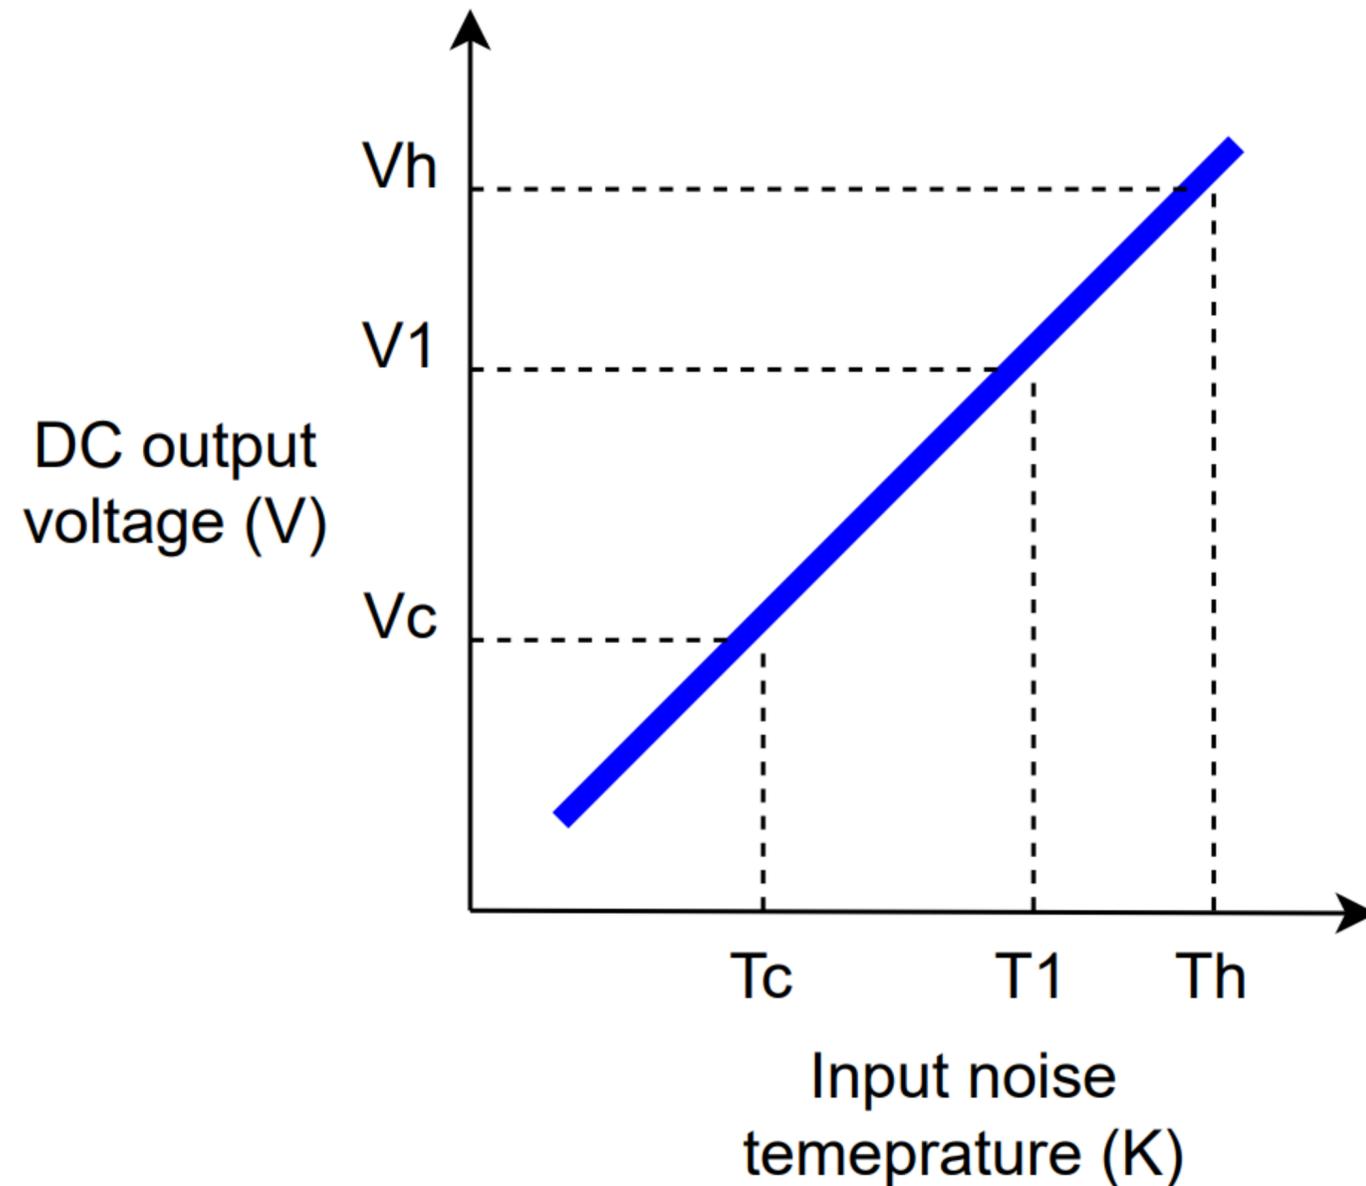

Temperature and device tolerance dependent

Water vapour radiometry

UNIVERSITEIT VAN PRETORIA
UNIVERSITY OF PRETORIA
YUNIBESITHI YA PRETORIA

T_c and T_h are known
 V_c , V_h and V_1 are measured

$$T_1 = \left(\frac{V_1 - V_c}{V_h - V_c} \right) (T_h - T_c) + T_c$$

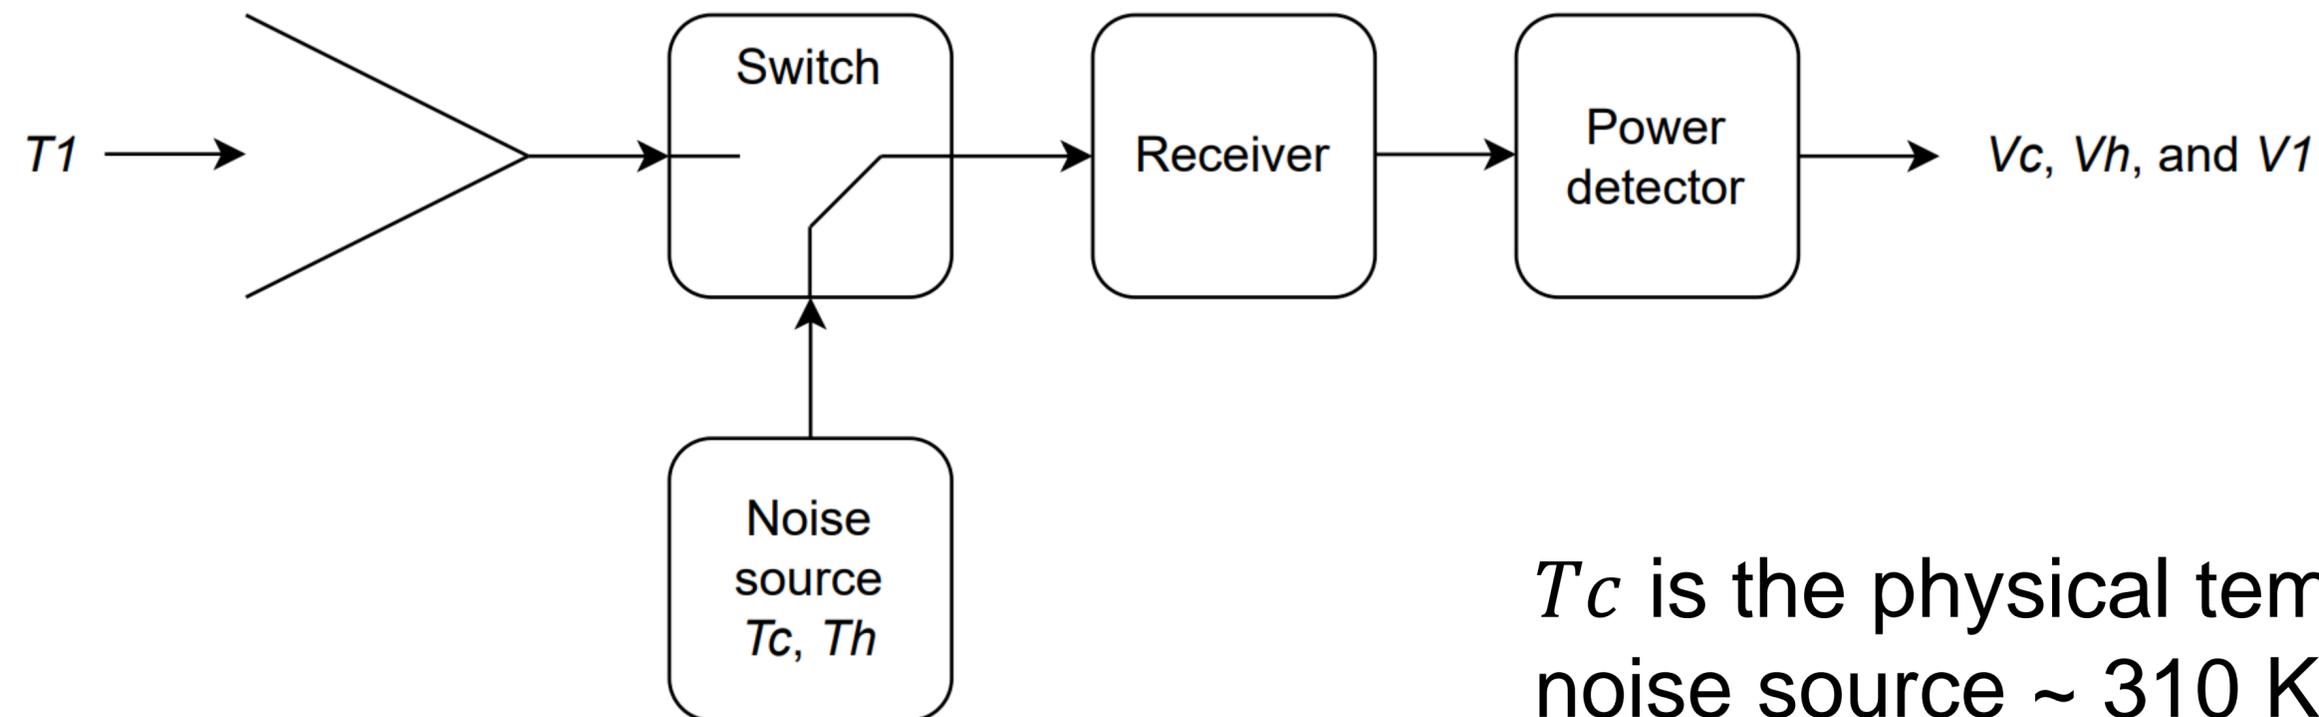

Calibration

UNIVERSITEIT VAN PRETORIA
UNIVERSITY OF PRETORIA
YUNIBESITHI YA PRETORIA

Viewing black-body noise source of known noise temperature

T_c is the physical temperature of the noise source ~ 310 K

T_h is not known exactly but ~ 700 K

Calibration

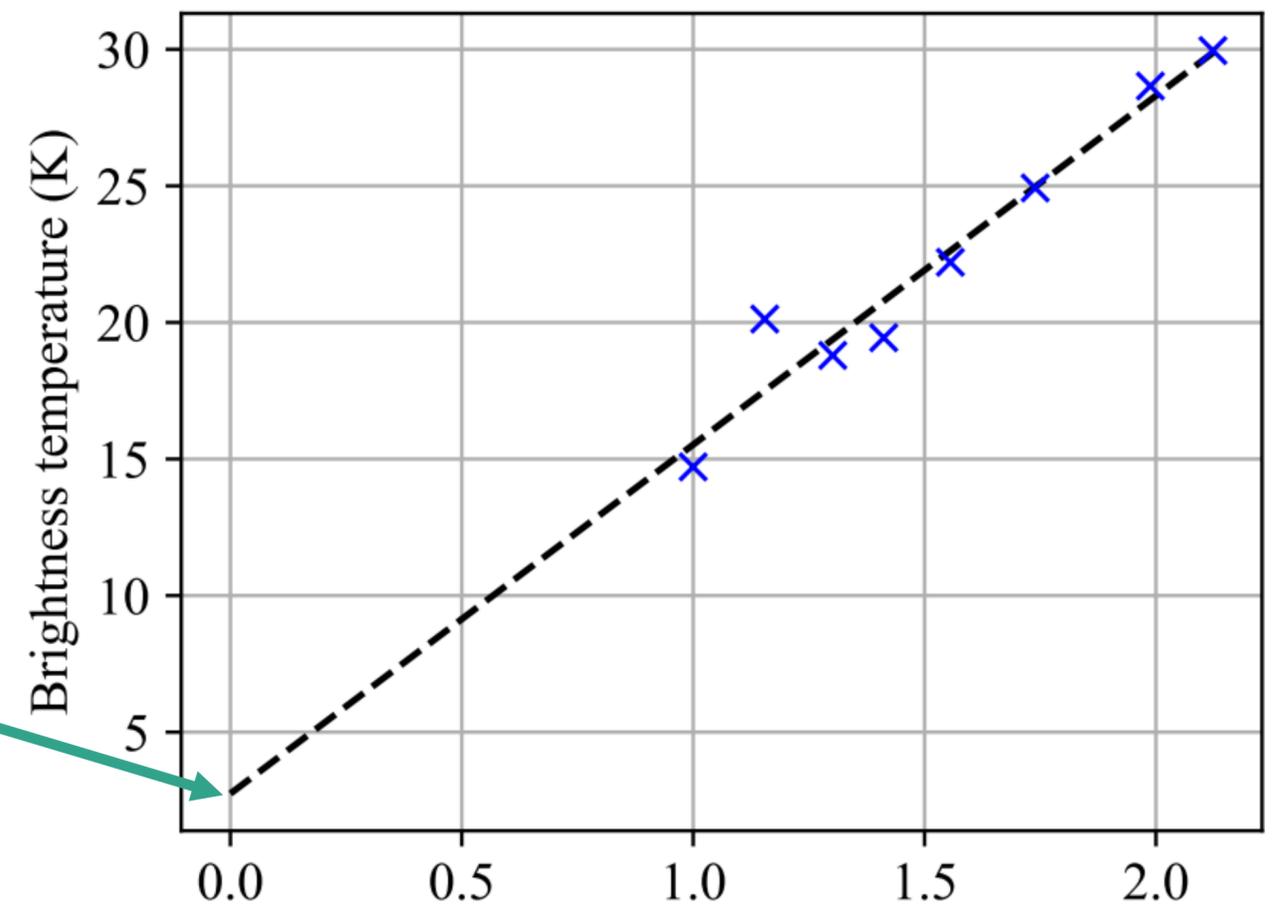

UNIVERSITEIT VAN PRETORIA
UNIVERSITY OF PRETORIA
YUNIBESITHI YA PRETORIA

WVR3 is a tipping curve radiometer

23 GHz channel

Cosmic background $T_c = 2,7 K$

Airmass = $\frac{1}{\sin(\theta)}$ where θ is the elevation angle

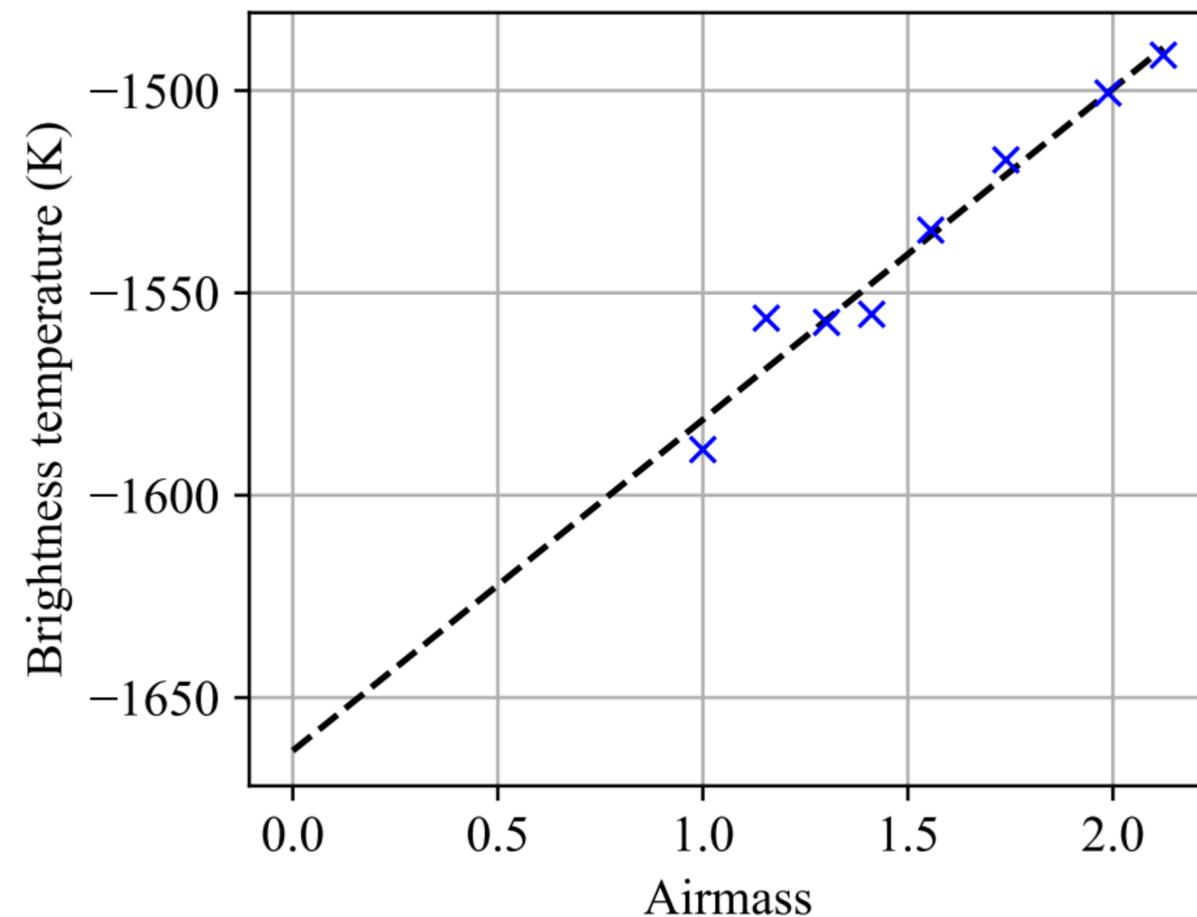

Calibration

UNIVERSITEIT VAN PRETORIA
UNIVERSITY OF PRETORIA
YUNIBESITHI YA PRETORIA

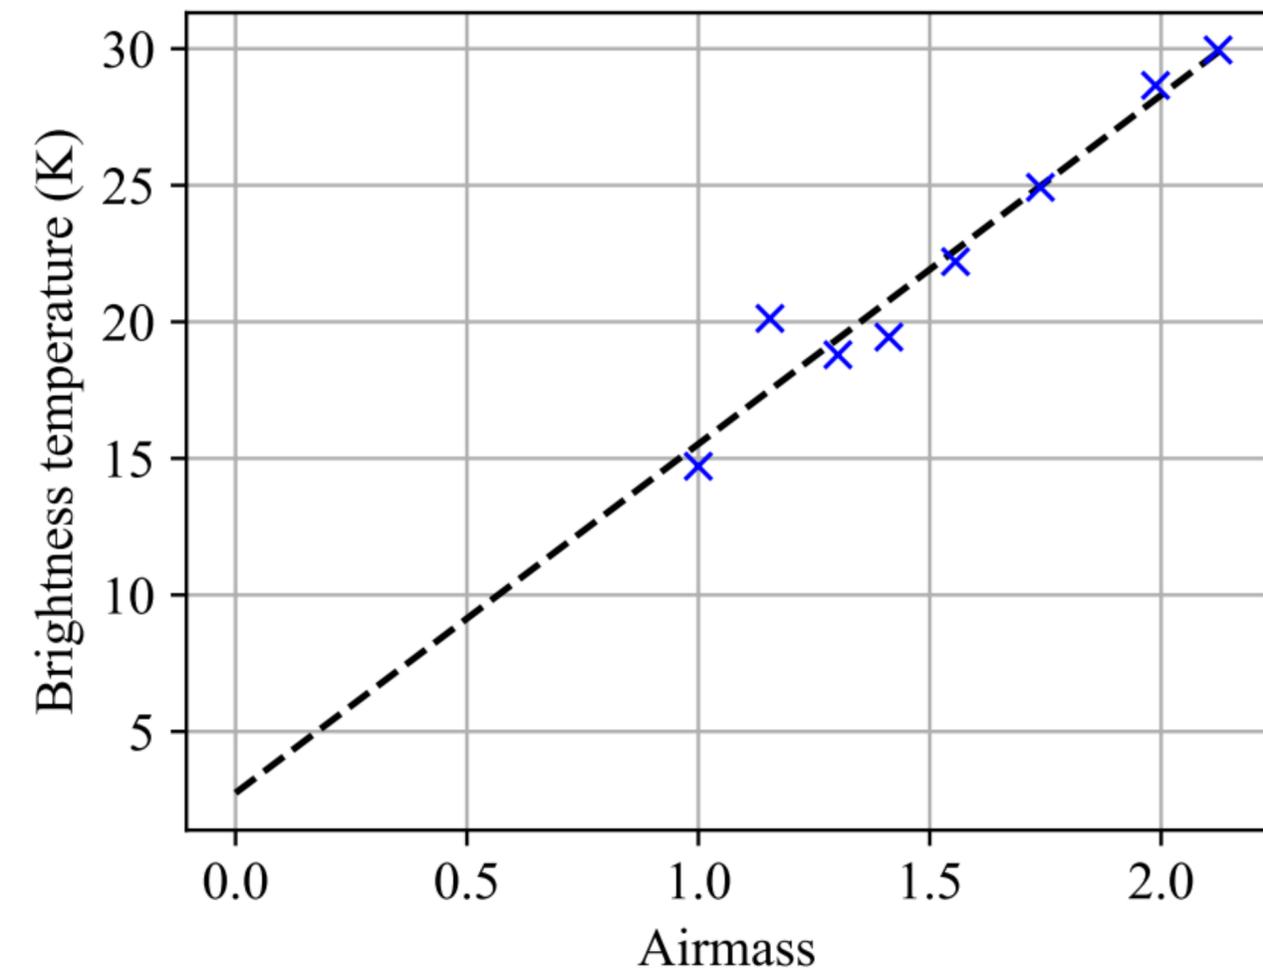

Uncalibrated
 $T_h = 700\text{ K}$

23 GHz channel

Calibrated
 $T_h = 372\text{ K}$

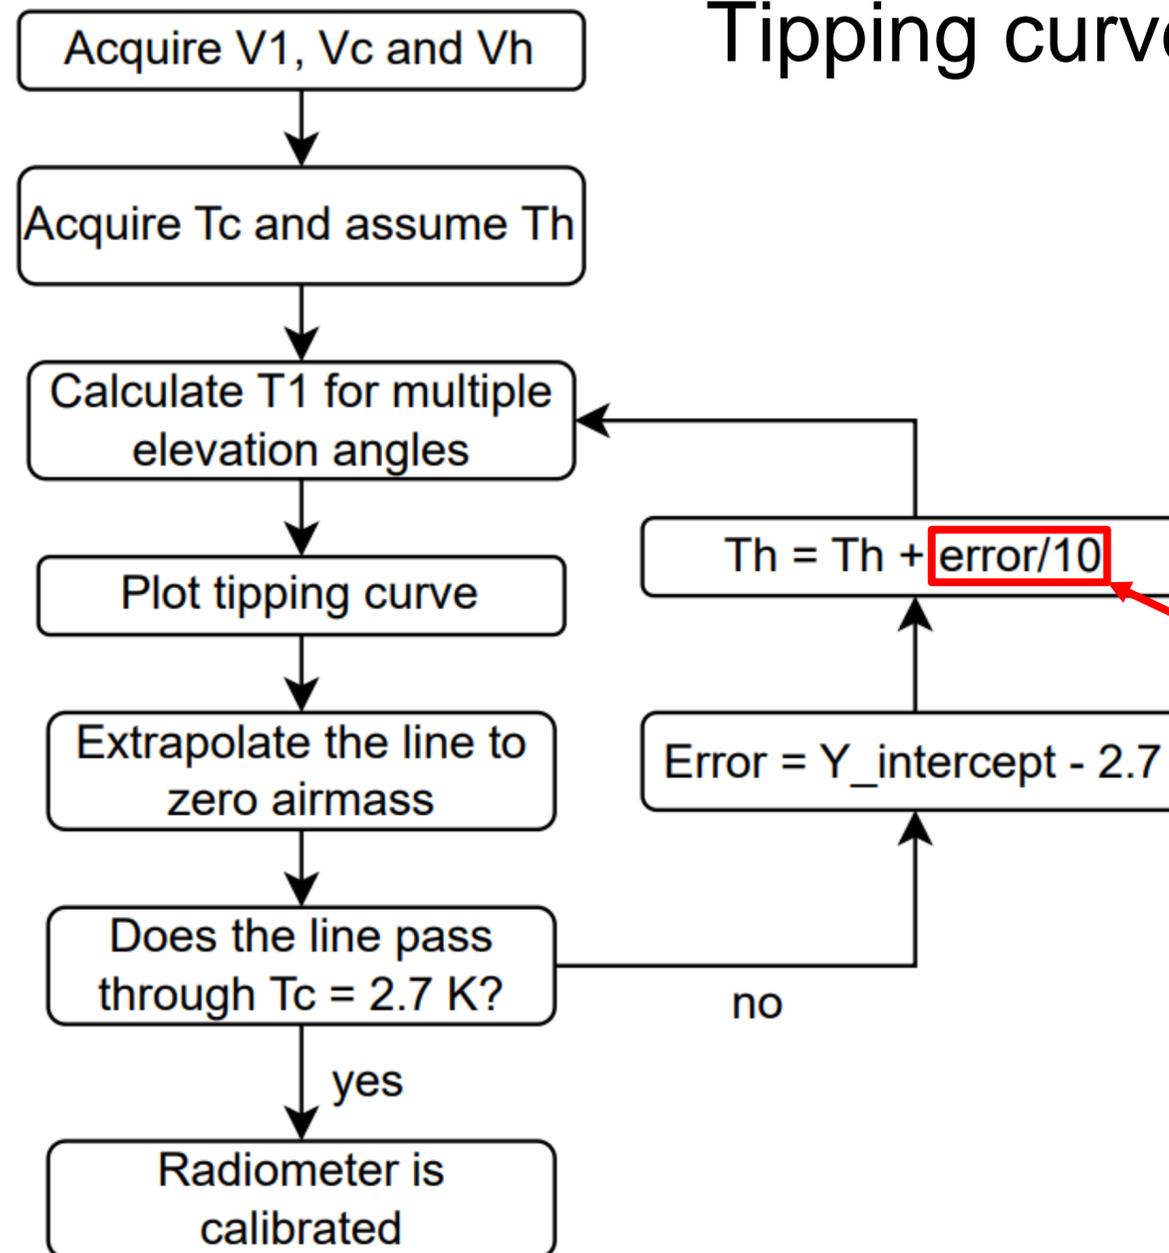

23 GHz channel

Calibration

Tipping curve calibration algorithm

Divide by 10 to prevent over correction and possibly an infinite loop

Data format

The data is stored in a csv file called “T240312.csv”, which is data taken on 12 March 2024 at the H.E.S.S in Namibia

Each tipping curve consists of 8 different elevation angles

Data format

UNIVERSITEIT VAN PRETORIA
UNIVERSITY OF PRETORIA
YUNIBESITHI YA PRETORIA

1. Index
2. Date - Time [YYYY-MM-DD hh:mm:ss]
3. ELV (Elevation angle [deg]) ← θ
4. VRF31 (Cold [V])
5. VRF31 (Hot [V])
6. VRF31 (Antenna [V]) ← V_c
7. VRF23 (Cold [V]) ← V_h
8. VRF23 (Hot [V]) ← V_1
9. VRF23 (Antenna [V]) ← T_c
10. TN23 (Noise Source [K]) ← T_c
11. TA23 (Plate [K])
12. TN31 (Noise Source [K])
13. TA31 (Plate [K])
14. TWS (Ambient Temperature [K])
15. HWS (Relative Humidity [%])
16. PWS (Barometric pressure [mbar])

Note that there are two channels, 23 GHz and 31 GHz. Both can be processed independently using tipping curves.

Note that 'Date - Time' are merged into a single column.

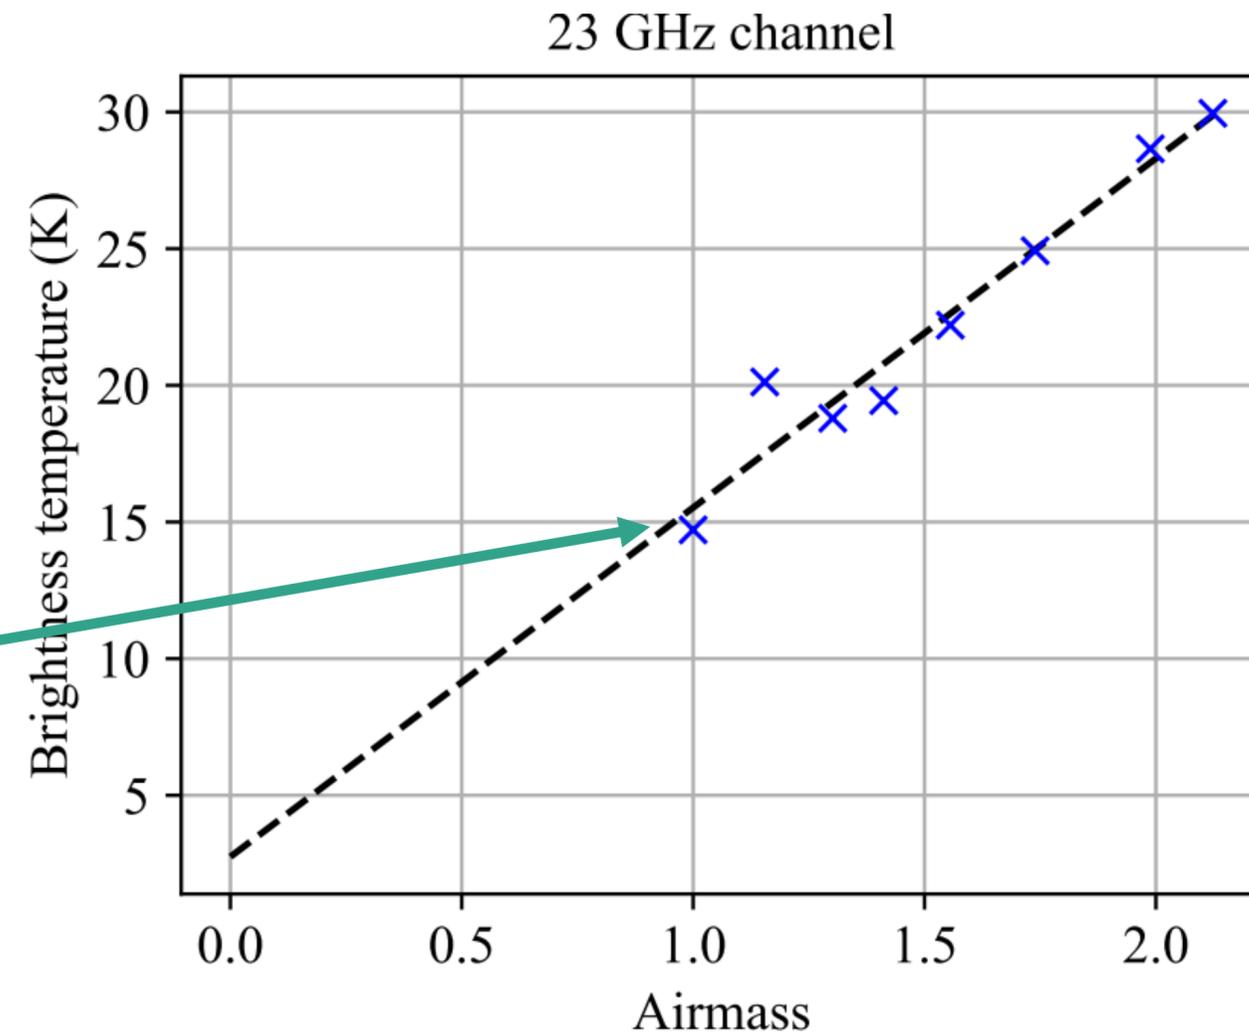

Activity

UNIVERSITEIT VAN PRETORIA
UNIVERSITY OF PRETORIA
UNIBESITHI YA PRETORIA

Using the supplied data files, T240312.csv, process the data to produce the 23 GHz sky brightness temperature at Zenith, 90 degrees elevation angle
